

## CV Builder

### Overview

We want to develop a web based application for building CV. Through this application, users can add, update or delete his/her CVs. Users can create CV using existing layouts. Users need to register first to access the web application.

### Functional Requirements:

#### 1. Registration 4 Hours

When anyone opens the sign-up link, they will see the form with the following fields:

1. Username (Mandatory)
2. Email (Mandatory)
3. Contact Number (Optional)
4. Password (Mandatory)

OR Register via Google or Facebook account

#### 2. Login 4 Hours

Users can log in via username/email and password OR with Google and Facebook login. After successful login, users will be redirected to the Dashboard page.

#### 3. Dashboard 4 Hours

In this page, users will see the CVs prepared by him earlier and would be able to preview, edit, download a CV in the form of PDF or share it over social media. If the user clicks on edit CV, he will be redirected to the editor page. Dashboard will also have an add button for the user to create a new CV. Every download / share will require a payment to be made.

#### 4. Layouts 4 Hours

In layouts, users will be able to preview the 2 - 3 basic predefined layouts and choose one to start making their CV.

#### 5. Editor 12 Hours

This page will be divided into two vertical sections, one with form fields asking the user for the info to be filled in the CV, and another for previewing the CV with the information entered according to the layout. Layout can be customized in the form of fonts, sizes and colors.

The form can be stepped in following manner -

1. Basic Details - primary info of user such as image, name, email, phone, address, city, state, pincode and introductory paragraph.
2. Education - educational qualifications like degree name, institution, percentage, etc.
